

THE GYP MONSTER MAKES DISINTEGRATING SCRAP GYPSUM DRYWALL EASY AND IT SAVES YOU MONEY!

Wasting Your Money on Dumpsters?

Over 80% of dumpster volume at a construction site is generated by gypsum wallboard scrap.

The Gyp Monster reduces to powder over 50 tons of scrap gypsum drywall per day at fractions of the cost of traditional waste disposal.

You are legally allowed to pulverize your new waste gypsum drywall and spread it on the construction site the same as fill dirt!

Force// With 80 gypsum-hungry teeth, over 40,000 pounds of force is exerted per tooth over 36 inches of cutting length.

Horsepower// The Kohler Twin Cylinder Industrial Engine delivers 25 available horsepower at 3,750 RPM's.

Dust Control// Gyp Monsters virtually eliminate dust with a pulverized scrap auger and a cutter box vacuum system.
